Terms of Use Policy Dec 17, 2020 Version 1.0.5 Fix an in-app purchase issue Sometimes it's hard to put into words how unique an app is! This is one of those cases! I downloaded this app and it didn't just give me proper information, or data, but I found that I learned a lot from this app. How often does this happen? Not very often is this the reason why I feel that this is one of these special unique apps! Thank you for the developer who designed and released it here. For all those who take the time to read this, please download it now, I can't believe you're sorry. ( Really ) The best comments I have: Thank you very much. At some point the reason I'm still developing this app is the user like you, you guys encourage me to move forward. Any further question you feel free to email me support@7littlemen.com I have been using it for months to check and track my phone's data speeds and WiFi speeds, especially. Nothig complex. This app does everything I want easily and quickly. I don't find any of this annoying, intrusive or irritating – it's easy to check my speeds/logs without anything distracting me. I went out of my way to write this review because I feel this is unusual in apps more, but Wifi was a gem for its simplicity and ease of use. Really glad I found it. Thank you for your comments. If you have any further questions or suggestions, you can send me support@7littlemen.com Gave these four stars by e-mail. Trying to check home WiFi before the school starts this year. The app works well, but after several examples of rooms, it will turn you off for the day, and request to join the deluxe version by paying for the app. I have to distribute my home examination over several days. Still four stars. Thank you for using it, if you have any problem, feel free to send an email support@7littlemen.com The developer, Xiaoyan Huang, has pointed out that the app can include the handling of data as described below. Learn more App Support Privacy Policy WiFi network strength is something you'll consider if you have more than one network to connect to. At home, you only have the one network for which you pay, pay, if your neighbor's Wi-Fi is better, you can still only use your own. In a public area where there are multiple public networks to choose from, you should check The Wi-Fi network strength and connect to the strongest. Both iOS and Android have a built-in tool that lets you view Wi-Fi network strength. This is how it works in iOS. WiFi Network Strength On iOS, if you want to have a glimpse of which network is stronger, you just need to open the App Settings. Select WiFi and wait for the available networks to be listed. Look at the small WiFi icon next to each network. The number of filled arcs indicates which is the stronger network. In the screenshot below you can see that the network called The Bat Cave is not as strong as the network called FATIMA-WAHAB. The filled arcs are a quick visual way to check the signal strength, but it doesn't tell you much because there isn't much range. If you want a more accurate reading of signal strength, you can install an app called Apple's AirPort Utility. Install the app and open the Settings app. Scroll down until you find AirPort Utility. Tap the app and turn on the Wi-Fi scanner. Once you've done this, open the AirPort Utility app from your home screen. Tap WiFi Scan and wait for all nearby networks to scan. Each network is displayed with a stat named Dbm. It will be a negative value. The larger this value, the better the signal strength. In the screenshot below, -27dBm is larger than -73dBm, which means that the network called FATIMA-WAHAB is stronger than the network called The Bat Cave. Make sure you revoke the app's Wi-Fi scan access when you're done, or drain the battery. There are many other apps that do what AirPort Utility does. If you have an app that can track your data usage, it may have a similar feature that you can use to view Wi-Fi network strength. It's a shame that iOS doesn't provide more information about network strength, but if we're honest, most users will be enough with visual help because it's easier to understand and gives a general idea of what they need to know.
